

DEDICATED RACK DESIGN & BUILD FACILITY

Many of our customers also benefit from our comprehensive FBT Rack System Design & Build Service, to provide 'ready to install' PA, VA and AV Racks in some of the largest and most successful installations.

Using our extensive portfolio of products, our highly skilled, UK based Engineering Team can custom design and build a

ready-to-install rack system to your own specifications. There is no set limit to the size of system we can produce; anything from a small single zone speech-only system, to a multi-zone system combining speech and music. Monitoring and battery back-up can also be accommodated by our in-house Engineering Facilities.

To ensure that we build your system to your specific requirements, we have produced a technical questionnaire which, once completed by yourselves or with our assistance, outlines requirements such as number of zones, music sources, number of microphones, etc.

Each system is supplied assembled, wired and fully tested before leaving our workshops. As part of the Build Package, each System is supplied with a comprehensive operations manual

incorporating user instructions for each individual piece of equipment, a schematic drawing of the System, a visual of the Rack layout and easy to use connection details. Finally, each System is given a unique identification number specific to your installation which allows our Engineering Team to easily identify any system we have assembled, to efficiently assist with any after sales service requirements.

Call the CIE-Group sales desk or your area representative on 0115 9770075 for advice, free site surveys and a highly competitive quotation.
